

Wednesday

1

9)	9	5	2															
3	7)	4	2	6	7													

2 Model and solve the problem.

$$\frac{7}{4} = \square \frac{\square}{\square}$$

$$1 \frac{1}{4} = \square \frac{\square}{\square}$$

3 A parallelogram has 4 sides with both sets of opposite sides parallel. What types of quadrilaterals are parallelograms? _____

Thursday

1 List 5 multiples. Circle the LCM.

5:
4:

2 Round 2.6487 to the nearest...

0.1: _____

0.01: _____

0.001: _____

3 Find each product.

$$\frac{1}{8} \times \frac{2}{5} =$$

$$\frac{2}{3} \times \frac{7}{8} =$$
