

Monday

$$\textcircled{1} \frac{13}{5} = \square \frac{\square}{\square}$$

$$1 \frac{4}{5} = \frac{\square}{\square}$$

$\textcircled{2}$ Simplify the fraction using the "cake" method:

$$\frac{90}{150} =$$

$\textcircled{3}$ Solve. Show your work.

$$7.64 + 0.298 =$$

$$7.6 - 7.372 =$$

Tuesday

$\textcircled{1}$ Find each product.

$$3 \frac{2}{6} \times 1 \frac{1}{2} = \frac{\square}{6} \times \frac{\square}{2} =$$

$\textcircled{2}$ Evaluate the expression.

$$3 + (8 - 5) \times 2 + 1$$

$\textcircled{3}$ Find each product.

$$0.17 \times 2.3$$

$$4.7 \times 8.6$$

① Solve.

$$\frac{9}{10} \div \frac{2}{3} = \frac{\square}{\square} \times \left(\frac{\square}{\square} \right) = \frac{\square}{\square} =$$

② Write and solve an expression for the following situation:

"3 times the difference between 41 and 30"

③ Find each quotient.

$$4.5 \div 1.8 =$$

$$5.8 \div 4 =$$

① Solve.

$$\frac{8}{9} \div 3\frac{1}{5} = \frac{\square}{\square} \times \left(\frac{\square}{\square} \right) = \frac{\square}{\square} =$$

② Find the area.
